“Durable, functional & easy to maintain make the Wave a must-have for portable sanitation.”

Chlorine treated water in your handwash station is an important step towards improved hygiene.

The beauty of the two-station Wave is its versatility, safety and stability. To prevent tip overs it has a low center of gravity, a sealed water tank that allows water to be treated with bacteria killing chlorine tablets and can be easily combined with another Wave to create a large capacity, four person wash station.

“Easy to maintain,
easy to use.”

Operating the Wave is as simple as pressing the baby foot pump to dispense a continuous stream of water and the large basin has more than enough room for users to wash from finger tip to elbow.

With 640 average washes the Wave is ideal for large events. Combine two Waves, add an umbrella and create a nice shaded area where four people can comfortably wash their hands.

When it comes to safety, the Wave has a sealed tank that allows the use of chlorine to kill harmful bacteria.

Using a strong, durable hinge to connect the base and lid insures the Wave will provide reliable service for many years.

Pressing the recessed, baby foot pump delivers an immediate stream of water.

A strong, molded-in nozzle resists damage from vandalism or during transport.

reviews

“The durability and ease-of-use has made me a long-time Wave customer.”
